

Verified work before speculative value.

Plastitrace turns verified plastic recovery into **accountable settlement** and future **environmental-credit** optionality.

The trust layer comes first.

LEDGER 01

Material Settlement

Physical plastic is paid in **KES** through existing rails. Verified work is rewarded immediately without speculative risk.

Unit	Kilogram (kg)
Settlement	KES (Fiat)
Phase	Active

LEDGER 02

Impact Attributes

Serialized environmental outcomes (PRC/CIU). Locked until underlying lots pass **independent verification** and no-double-counting gates.

Unit	Metric Tonne (t)
Settlement	Serialized Credit
Phase	Verification Gate

LEDGER 03

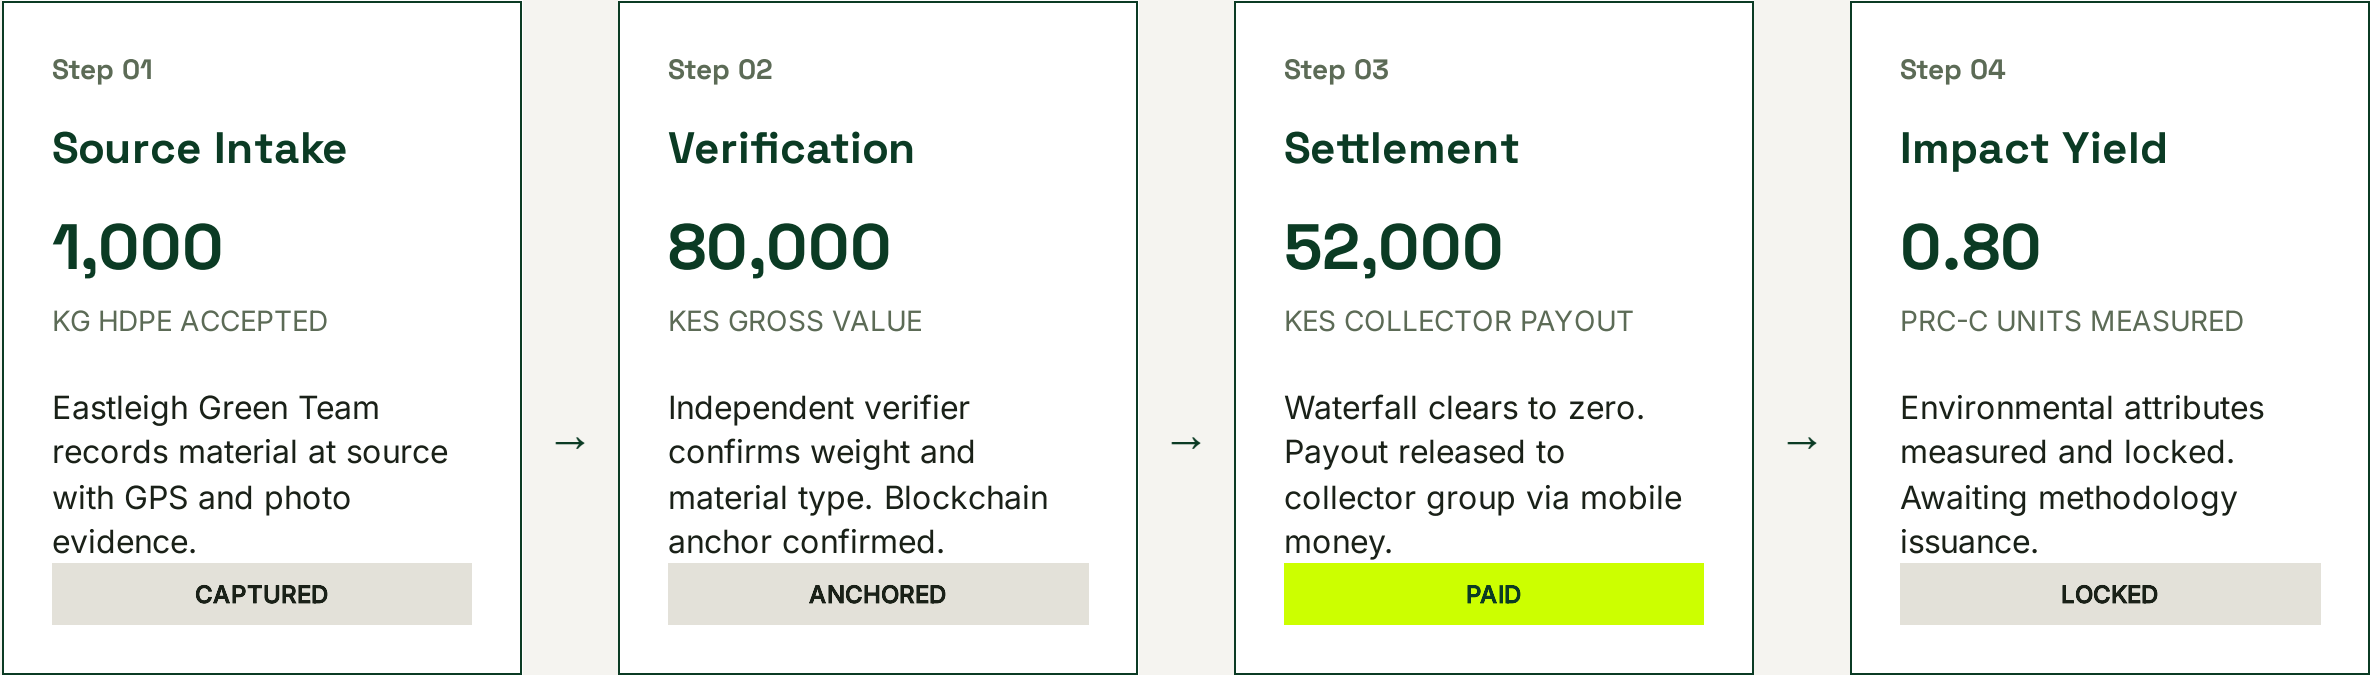

Protocol Utility

Future coordination instrument for network access and governance. Deferred until **operational maturity** is proven.

Unit	TRACE
Settlement	On-chain
Phase	Deferred

One Nairobi lot, end to end.

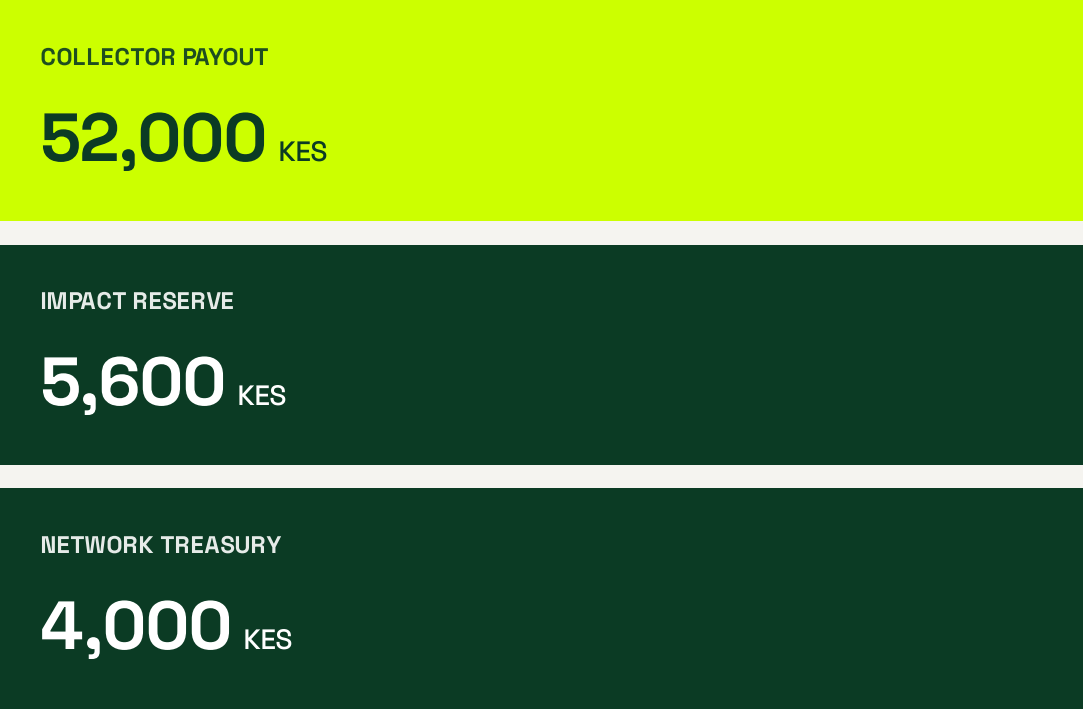

Tracing PT-NBO-260907-001 from Eastleigh collection to verified settlement.

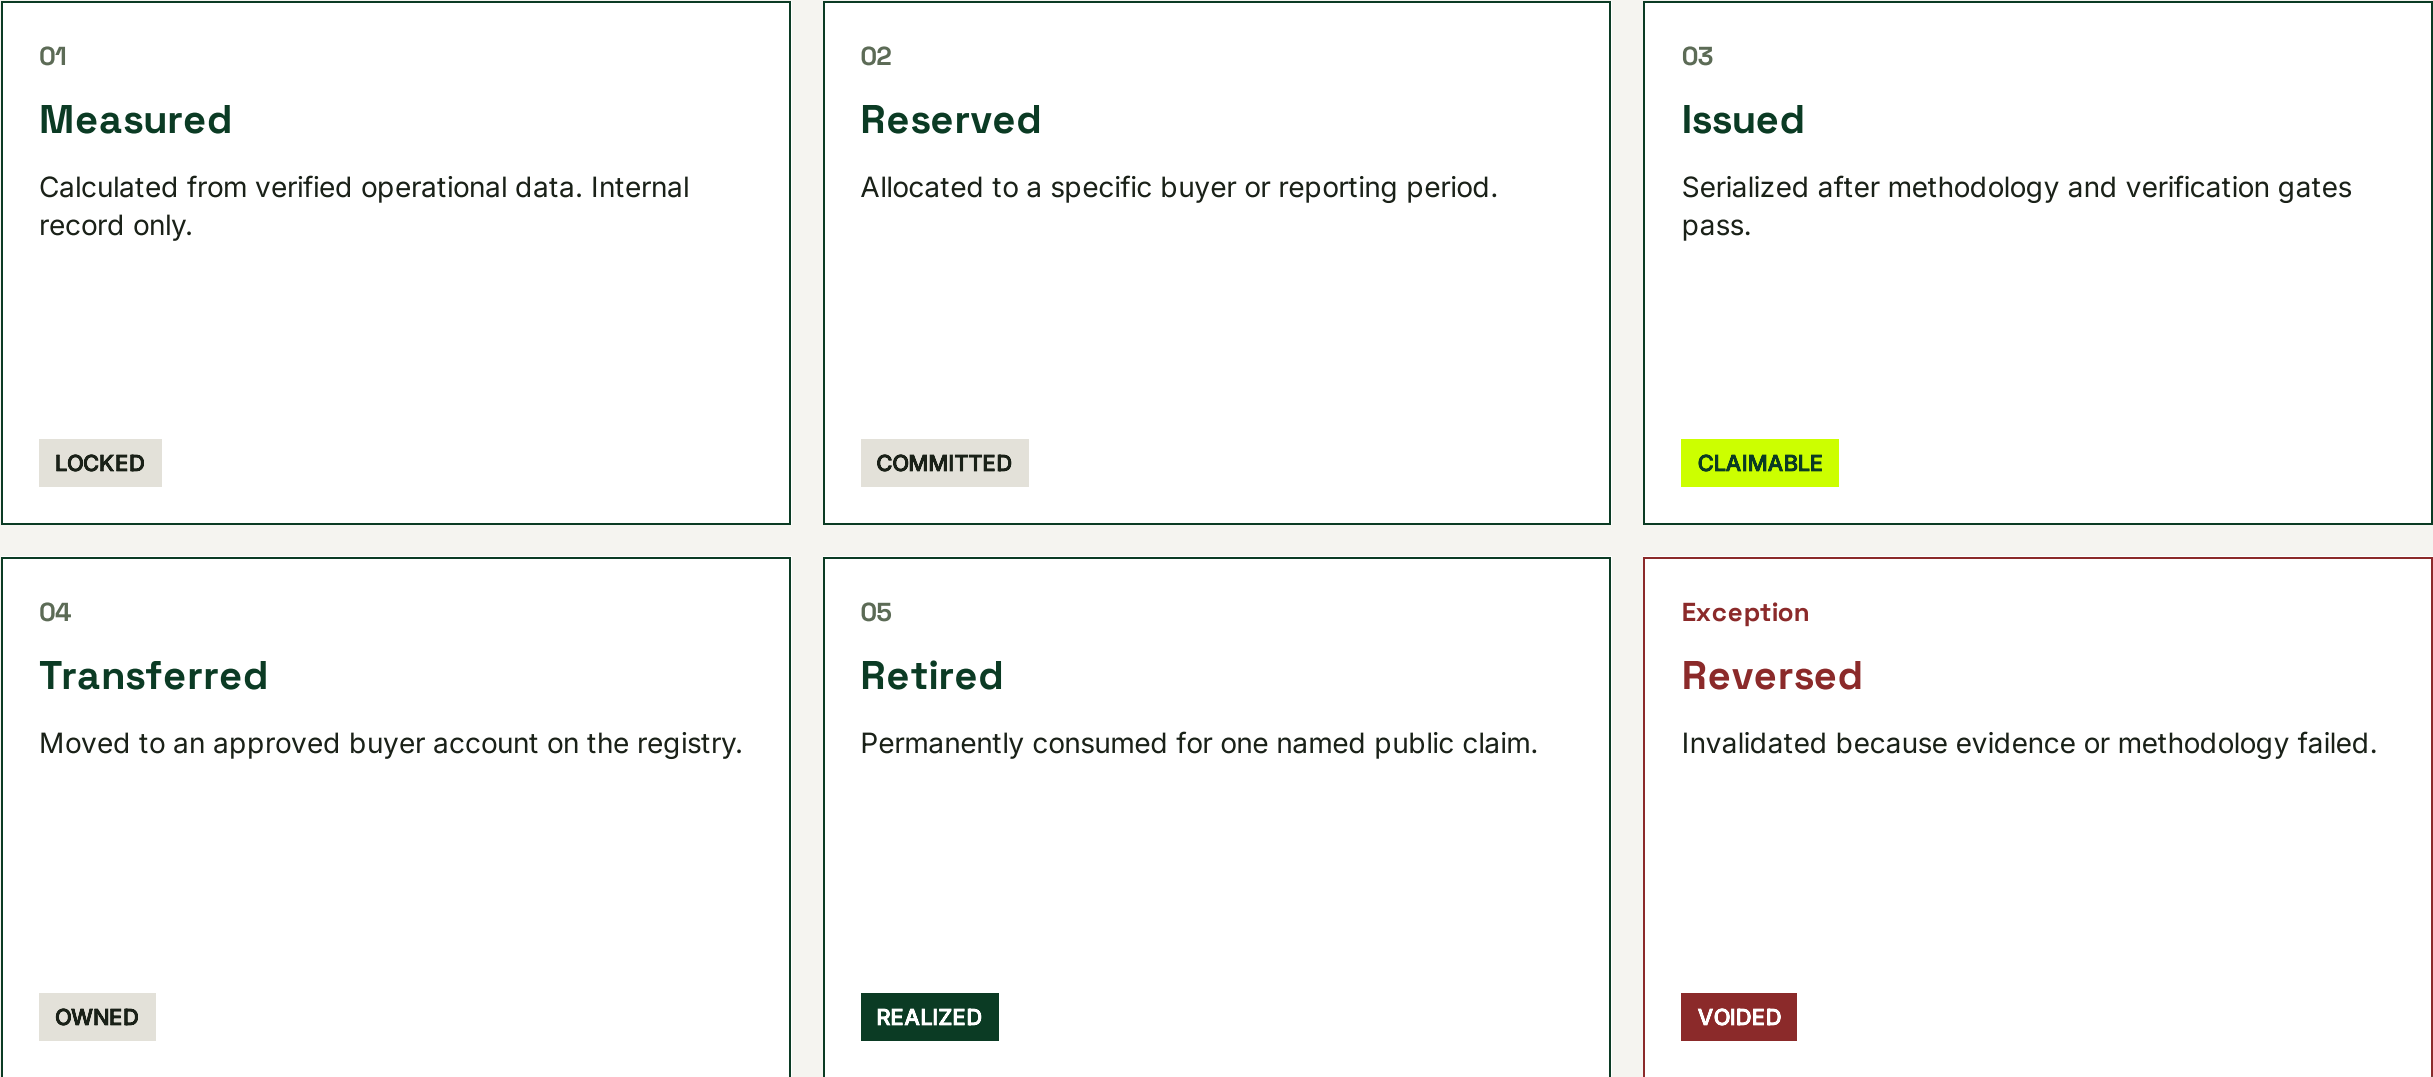

KES 80,000 clears transparently.

Rule version: pilot-2026-01

ALLOCATION	AMOUNT (KES)	SHARE
Source collector network	52,000.00	65.00%
Recovery hub	8,000.00	10.00%
Verification & data quality	6,400.00	8.00%
Impact reserve	5,600.00	7.00%
Plastitrace platform	4,000.00	5.00%
Network treasury	4,000.00	5.00%
Total	80,000.00	100.00%

Impact value is earned in stages.

No double counting by construction.

RISK 01

Double Issuance

One kilogram being issued twice across different credit series or reporting periods.

✓ Unique (Lot ID, Attribute) Allocation

RISK 02

Double Claiming

Two buyers claiming the same environmental outcome for their public reporting.

✓ Serialized Retirement Statements

RISK 03

Overlap Claims

Carbon and plastic credits overlapping without an explicit mass-balance boundary.

✓ Explicit Methodology Mapping

RISK 04

Ghost Material

Paying or issuing credits on material that was recorded but never received at a hub.

✓ Accepted Quantity Gate

Two rails, one auditable story.

OPERATIONAL RAIL

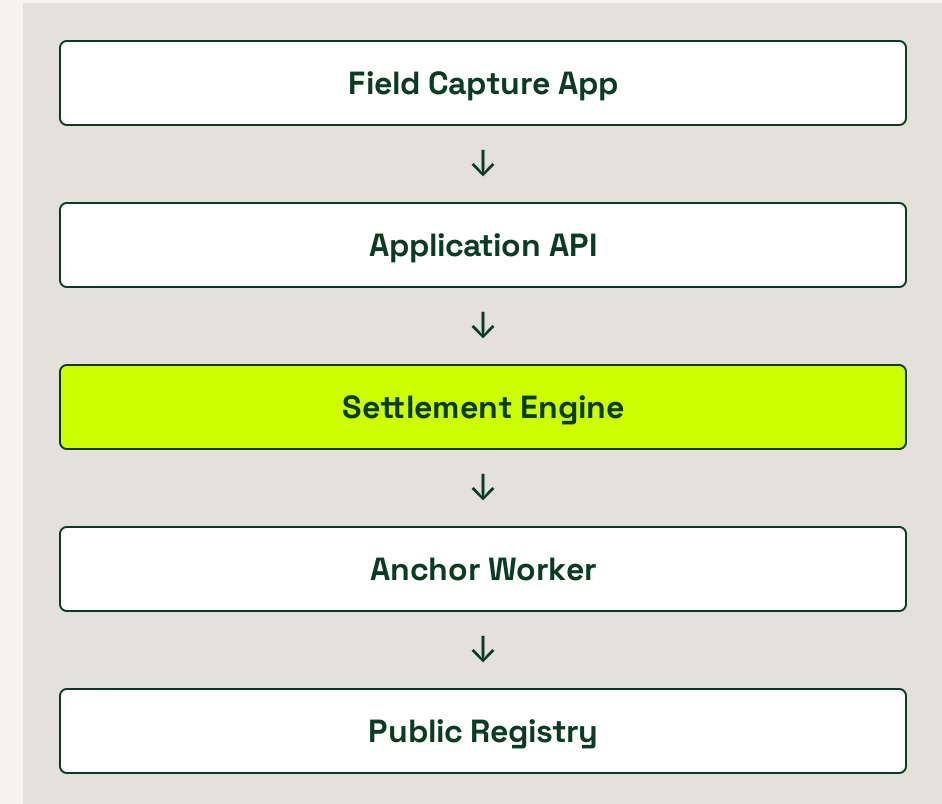

PostgreSQL + Object Storage

- Source of truth for PII and evidence binaries
- Transactional lot lifecycle and event history
- Real-time settlement and payout calculation

PUBLIC PROOF RAIL

Smart Contract Registry

- Immutable lot identity and evidence anchors
- Public verifier attestations and custody state
- Serialized impact credit issuance and retirement

Start with payouts. Earn the right to tokenize.

PHASE 01

Operational Identity

- PostgreSQL schema
- Lot creation API
- Evidence uploads
- Verifier queue

PHASE 02

Public Proof

- Registry deployment
- Outbox worker
- Confirmation recon
- Public lot pages

PHASE 03

Value & Impact

- Methodology versioning
- Credit issuance
- Buyer retirement
- Impact certificates

PHASE 04

Protocol Utility

- Coordination utility
- Fee mechanics
- Governance pilot
- Network treasury
